

ADATIS

Thank you for purchasing an ADATIS door terminal.

You have chosen a device with which you can also communicate with visitors via your smartphone or tablet. For this purpose you can use the DoorKeeper App, which can be downloaded free of charge via the Google Playstore (Android) or Apple App Store (IOS).

If you want to use the DoorKeeper App on your Android device outside your local network or in combination with IOS devices, it is necessary to set up an ADATIS SIP server account. To request registration, please fill out this form and send it to the following e-mail address:

support@adatis.com.

For a test period of 60 days, the Adatis door station and the remote stations are registered free of charge on the Adatis SIP Server. The registration data will be sent electronically upon application. After the trial period has expired, the accounts on the SIP server are automatically blocked.

If you wish to continue using the service after the trial period, this is possible for an annual fee.

Please note that for unrestricted use of the DoorKeeper App outside the local network, your mobile network operator must allow the use of VoIP services without restrictions. Contact your mobile phone operator for more information.

Further information on setting up communication via the ADATIS SIP server can be downloaded on our homepage www.adatis.com.

Please send us the following information to request an ADATIS SIP Server account:

Name:	<input type="text"/>
Address:	<input type="text"/>
Country:	<input type="text"/>
